

JENDRICK RIAN GALUT

Surrey, BC | 672-272-3193 | rcgalut1@gmail.com | linkedin.com/in/jendrick-galut | github.com/jeam-cloud

Education

Trinity Western University

Jan 2023 – Apr 2028

Bachelor of Science in Computing Science, Minors in Business

GPA: 3.9

Awards: Dean's List (4x)

Summary of Qualifications

Languages: Python, JavaScript, Java, C, C#, SQL, HTML/CSS

Frameworks/Libraries: FastAPI, Flask, SQLAlchemy, React, Pytest

Databases: PostgreSQL, MySQL, SQLite

Tools/Platforms: Git, Docker, GitHub Actions, GitLab CI, Vercel, Render, Supabase, Postman

AI/Emerging Technology: Anthropic API, OpenAI API, Ollama, Trusted/Sandboxed AI System Design

Risk & Controls: Access control administration, audit logging, JWT/token-based authentication, static analysis, security sandboxing, incident and case-management tracking

Work Experience

Building Manager

Apr 2026 – Present

AWM Alliance Real Estate Group

Surrey, BC

- Administered access control and identity credentialing systems (Aurora fob programming, Pass10x, Bluebox enterphone) for 100+ residents, managing credential issuance, deactivation, and audit logging in line with internal controls
- Logged and tracked incident reports, maintenance requests, and bylaw compliance issues through the AWM Web Portal, a structured case-management system, maintaining digital audit trails across the property
- Automated inbox triage and risk-flagging with a Windows Power Automate workflow that sorts and prioritizes incoming resident and maintenance emails by category and urgency

Teaching Assistant – CMPT 140 (Intro to Computing Science)

Sept 2025 – Apr 2026

Trinity Western University

Langley, BC

- Improved assignment completion rates by 20% by leading weekly open-lab sessions for 25+ students on Python fundamentals, functions, recursion, and file I/O
- Guided students through algorithm analysis of linear search, selection sort, and binary search, and reinforced core data structures including dictionaries, tuples, stacks, and queues through worked Python examples
- Coached students in one-on-one office hours and evaluated weekly assignments against consistent quality rubrics, diagnosing defects in student code and delivering structured feedback tied to course learning outcomes

Teaching Assistant – CMPT 470 (Bioinformatics)

Jan 2026 – Apr 2026

Trinity Western University

Langley, BC

- Delivered instructional support for an upper-year course covering sequence alignment, phylogenetic analysis, and ML applications in genomics
- Led hands-on labs on BLAST and molecular visualization tools, evaluating computational biology problem sets and delivering targeted technical feedback to students

Projects

RateMyTWU | *React, FastAPI, PostgreSQL, Supabase, Vercel*

July 2025 – Present

- Launched a professor review platform serving 50+ organic users, letting students search professors, view aggregate ratings and review counts computed via joined SQLAlchemy queries, and bookmark courses; built on a FastAPI REST API over PostgreSQL with a React frontend on Vercel and a custom domain on Cloudflare DNS
- Automated onboarding of each semester's timetable with a Python PDF scraper whose regex-based tokenizer classifies every line into course, section, and instructor fields before upserting into the database
- Enabled students to build out a full degree checklist by engineering an interactive React drag-and-drop course planner using dnd-kit, backed by a Kanban-style board with persisted state across semesters
- Secured user accounts and protected API access against unauthorized access by implementing JWT-based authentication, verifying tokens issued by Supabase Auth against its public JWKS endpoint on every request

ARTHUR | *Electron, React, FastAPI, SQLite, Ollama*

June 2026 – Present

- Engineered a local-first, trusted AI desktop assistant running fully on-device, pairing an Electron/React frontend with a FastAPI backend spawned as a subprocess behind a per-launch bearer token, addressing data privacy and cloud-security exposure
- Designed a governance and risk-control framework for the agent's actions: task-mode privilege separation and a CONFIRM-risk approval broker, sandboxing code execution in Docker with per-tool network policy and a static-analysis scan surfaced in the approval dialog
- Mitigated prompt-injection risk from untrusted content by spotlighting web pages and file attachments between explicit markers before they reach the model, verifying the control with a dedicated pytest assurance suite covering the prompt-assembly layer

Leadership and Extracurricular

ICPC Pacific Northwest Regional Contest | *Simon Fraser University, Spring 2024* — Placed top-50 regionally among university teams by solving graph traversal and dynamic programming problems in Python under timed contest conditions
