

JENDRICK RIAN GALUT

Surrey, BC | 672-272-3193 | rcgalut1@gmail.com | linkedin.com/in/jendrick-galut | github.com/jeam-cloud

Education

Trinity Western University

Jan 2023 – Apr 2028

Bachelor of Science in Computing Science, Minors in Business

GPA: 3.9

Awards: Dean's List (4x)

Summary of Qualifications

Product & Process: Requirements definition and documentation, traceability across teams, structured case-management/issue tracking, cross-functional coordination, translating user needs into technical specs

Languages: Python, JavaScript, Java, C, C#, SQL, HTML/CSS

Frameworks/Libraries: FastAPI, Flask, SQLAlchemy, React, Pytest

Databases: PostgreSQL, MySQL, SQLite

Tools/Platforms: Git, Docker, GitHub Actions, GitLab CI, Vercel, Render, Supabase, Postman

AI/LLM: Anthropic API, OpenAI API, Ollama

Work Experience

Building Manager

Apr 2026 – Present

AWM Alliance Real Estate Group

Surrey, BC

- Coordinated access-provisioning requirements and scheduling for 100+ residents across three credentialing systems (Aurora, Pass10x, Bluebox), balancing resident requests against system and building constraints
- Documented and prioritized incident reports, maintenance requests, and bylaw issues within a structured case-management system, ensuring traceability and clear handoff across maintenance, board, and resident stakeholders
- Identified a manual, error-prone triage process and replaced it with a repeatable Windows Power Automate workflow that sorts and prioritizes incoming resident and maintenance requests by category and urgency

Teaching Assistant – CMPT 140 (Intro to Computing Science)

Sept 2025 – Apr 2026

Trinity Western University

Langley, BC

- Improved assignment completion rates by 20% by leading weekly open-lab sessions for 25+ students, translating abstract concepts (recursion, file I/O) into concrete, worked examples for a diverse range of learners
- Guided students through algorithm analysis of linear search, selection sort, and binary search, and reinforced core data structures including dictionaries, tuples, stacks, and queues through worked Python examples
- Coached students in one-on-one office hours and evaluated weekly assignments against consistent rubrics, diagnosing gaps in student understanding and delivering structured, actionable feedback

Teaching Assistant – CMPT 470 (Bioinformatics)

Jan 2026 – Apr 2026

Trinity Western University

Langley, BC

- Delivered instructional support for an upper-year course covering sequence alignment, phylogenetic analysis, and ML applications in genomics
- Led hands-on labs on BLAST and molecular visualization tools, evaluating computational biology problem sets and delivering targeted technical feedback to students

Projects

RateMyTWU | *React, FastAPI, PostgreSQL, Supabase, Vercel*

July 2025 – Present

- Scoped, built, and launched a professor review platform now organically used by 50+ students, defining the core feature set (search, aggregate ratings, bookmarking) around target user needs and shipping it on a FastAPI/PostgreSQL backend with a React frontend
- Automated onboarding of each semester's timetable with a Python PDF scraper whose regex-based tokenizer classifies every line into course, section, and instructor fields before upserting into the database, removing a recurring manual data-entry step
- Defined and delivered a full degree-planning feature by engineering an interactive React drag-and-drop course planner using dnd-kit, backed by a Kanban-style board with persisted state across semesters
- Secured user accounts and protected API access by implementing JWT-based authentication, verifying tokens issued by Supabase Auth against its public JWKS endpoint on every request

ARTHUR | *Electron, React, FastAPI, SQLite, Ollama*

June 2026 – Present

- Translated product and safety requirements into a concrete system design for a local-first AI desktop assistant: task-mode privilege separation and an approval broker that gates risky actions, pairing an Electron/React frontend with a FastAPI backend
- Defined the scope of an acceptable-risk boundary for autonomous actions and implemented it as sandboxed code execution in Docker with per-tool network policy and a static-analysis scan surfaced in the approval dialog
- Identified a product risk – prompt injection from untrusted web content and file attachments – specified the mitigation, implemented it, and validated the requirement was durably met with a dedicated pytest suite

Leadership and Extracurricular

ICPC Pacific Northwest Regional Contest | *Simon Fraser University, Spring 2024* — Placed top-50 regionally among university teams by solving graph traversal and dynamic programming problems in Python under timed contest conditions
